Work Experience

- Joy IT Consulting (Neutrinos), Software Engineer, Sep 2019 ~ Present

Here I have worked on Neutrinos application which was a low code, drag and drop platform.
Here I have worked on three projects

Projects

- Description

First one is I have worked on Neutrinos product development in which we created a component, which developers or users will drag and drop in neutrinos platform to generate angular material code for an angular material menu.

Technologies Used

Html, CSS and JavaScript.

- Description

Second project is insurance related project, in which client will be able to create insurance policies by using some predefined values and data inserted by users/customers and calculate the different policies available for a particular user using same information. In this project I have worked on frontend and backend both, in frontend I have designed pages, added frontend functionalities and in backend I have created api's for the same.

Technologies Used

HTML, CSS, React, Node.js, Express, Mongoose.

- Description

The Third project I worked on is Sales Resource Management, this will help a policy sales person in which sales person can create a contact make him as a prospect by filling the particulars if the person is interested in the product, sales person can add a calendar event of meeting or anything else and will take the feedback by creating feedback from the customer in the same calendar event. In this project I have worked on Designing and frontend functionalities.

Technologies Used

HTML, CSS, React.js.

- Tesquirel Solutions, Associate Software Engineer, Sep 2018 ~ August 2019

Here I was basically a front end developer working on both JavaScript and React. Here I worked on two projects.

Projects

- Description

First one it was a testing domain project which was basically designed to help insurance companies through which they can create test cases, test scenarios and etc by manually or by automatically by providing some information and following few protocols, which will help the testers by saving their time. This project also had some extra features like

1. Work flow setup which will help to assign task to testers/Developers and others.
2. Receiving email notifications on sending requests and taking actions on the requests.
3. Also user can take actions for requests in bulk at a time and etc.

Responsibilities

Designing, front end functionalities, code review, unit testing and deployment to server.

Technologies Used

Html, CSS, Bootstrap, React.

- Description

Second project was an Asset Management system which was suppose to help companies or any organization to manage their assets, which include some features like they can create their department, users, employees, service providers etc using this application and they can keep track of their assets, their delivery date, their billing information, there status etc.

Responsibilities

Designing, front end functionalities, unit testing.

Technologies Used

Html, CSS, Bootstrap, React.

- Designing and maintenance of the official website of the company Tesquirel Solutions.
