WORK EXPERIENCE

System Engineer
IBM India Pvt. Ltd.

09/2018 – Present   *Kolkata*

Achievements/Tasks

- Full-stack developer, currently working on an application that supports Manufacturing Engineering Services(MES) at various manufacturing plants of my client.
- 1st Project (IMEL) -Application is divided into mainly 2 modules, one is logistics and another is manufacturing. Logistics deal with the inbound /outbound movement of goods inside and outside of manufacturing units. The manufacturing unit deals with the manufacturing and packaging of the final product from the raw material. Both module get/ post data to different interfaces such as SAP, PCS, etc using SOA.
- 2nd Project (Auto Config Tool) - Developed this application from ground zero, worked as a React Js developer completely, and supported the database and node.js team .Developed a Windows AD SSO using node.js and some of the REST API. The only member in the React.js team, so design the complete UI singlehandedly and also worked with the database team to design new Stored Procedures. Integrated the UI with Power BI.

Technical Intern
Elite Dhobilite Pvt Ltd , Noida

02/2017 – 04/2017

Achievements/Tasks

- Worked as a Java and Front end dev intern . Developed Invoice printing desktop app using Java . Developed 3 web front end interfaces for internal use to support business movements .

PERSONAL PROJECTS

Fitness App in Angular (02/2019)
- Developed a Fitness app that tracks the fitness activity , Developed on Angular 6

Social Media App using MERN stack (05/2019 – 06/2019)
- Developed a basic Social Media App with all the basic functionality such as user authentication , authorization, post creation , CRUD operations etc using Front end technology as React.js and Back end using Node.js and framework Express.js and database as Mongo DB.

Mobile Surveillance System (06/2017 – 04/2018)
- Me, with my 3 team members developed an android app. App just needs an Android device which has a capability to connect to the WiFi and a rear camera. The app will work like a server. Just connect both client and server to the same wifi network . The app will show the URL and enter the URL to the web browser Enjoy the feed captured by android mobile .

Android Voting App (05/2017)
- Designed an Android App, which can be used as a voting system. It just needs an Aadhar Number as a username and an OTP as a password, which we will be sending to the user registered mobile no. during registration, Once the user logs in, The app will show the candidate name, The user will select a particular candidate and click on the vote button.

www.civilsuccess.com
- Developed a front end of a website as a freelancer using bootstrap

ERP System
- Developed a ERP system using PHP as back end and basic java script at the front end along with bootstrap that manages the attendance , project finance of the startup organisation
