- Got trained in Java, HTML5, CSS3 and SAP Sales and Distribution modules.
- Assisted in resolving incidents related to SAP SD.

PERSONAL PROJECTS

Short Meetup Sessions [SMS]

github.com/afreenaanjum/Short-Meetup-Session | short-meetup-session.herokuapp.com
- A MERN stack single page web application which facilitates the authenticated users to create or join a room to share and watch videos in-sync with each other. They can also communicate with each other by instant messaging.
- Redux, redux-thunk are used for managing the state of the application.
- Securing the data and authentication at backend is done with the help of JWT.
- The application is deployed on heroku.

Ticket-Master

github.com/afreenaanjum/Ticket-Master
- A MERN stack single page web application for managing tickets.
- Tickets can be assigned to the employees based on the department the ticket is related to.
- Allows to do CRUD operations on customers, departments, employees and tickets.

E-commerce API

github.com/afreenaanjum/e-commerce-backend
- A backend application built with Express which allows the authenticated users to order and buy products online. Data is stored on MongoDB.
- CRUD operations were set up for various models like products, cart-items, order-items, etc.
- Securing the data and authentication is done with the help of JWT.

CERTIFICATIONS

- **HackerRank Problem Solving (Basic) Certificate**
  https://www.hackerrank.com/certificates/6e25762a3d9b

- **DCT Academy**
  Coursework: MERN stack, Javascript, Redux,Redux-thunk,Mongoose.
